Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Peterson et al. (USPN 6,881,541).

Peterson discloses a fluidic circuit for processing fluid that comprises introducing the sample into a cartridge having: i) a lysing chamber for lysing the cells or viruses to release the nucleic acid therefrom, wherein the lysing chamber contains at least one filter having a pore size sufficient to capture the cells or viruses in the sample as the sample flows through the lysing chamber, and wherein the lysing chamber further contains beads for rupturing the cells or viruses; b) a waste chamber for receiving used sample fluid that has flowed through the lysing chamber; and c) at least a third chamber for receiving the nucleic released from the cells or viruses; b) forcing the sample to flow through the lysing chamber to capture the cells or viruses with the filter; c) forcing the used sample fluid that has flowed through the lysing chamber to flow into the waste chamber; d) placing a lysis buffer in the lysing chamber; e) agitating the beads to lyse

the cells or viruses, wherein the beads are agitated by sonicating the lysing chamber using an ultrasonic transducer coupled to a wall of the lysing chamber; and f) forcing the nucleic acid released from the cells or viruses to flow into the third chamber. The circuit further includes a reaction chamber, and the method further comprises the steps of forcing the nucleic acid and reagents to flow into the reaction chamber and amplifying the nucleic acid in the reaction chamber (claim 1-5).
